- Notes: Expanded laboratory testing for varicella, Minnesota

Food & Drug Administration (<u>Announcements</u>)

• Issued an EUA for Pemgarda for pre-exposure prophylaxis of COVID-19

2023-2024 Respiratory Disease

A Weekly Influenza Surveillance Report Prepared by the Influenza Division

Outpatient Respiratory Illness Activity Map Determined by Data Reported to ILINet

This system monitors visits for respiratory illness that includes fever plus a cough or sore throat, also referred to as iLI, not laboratory confirmed influenza and may capture patient visits due to other respiratory pathogens that cause similar symptoms.

2023-24 Influenza Season Week 11 ending Mar 16, 2024

*This map uses the proportion of outpatient visits to healthcare providers for influenza-like illness to measure the ILI activity level within a state. It does not, however, measure the extent of geographic spread of flu within a state. Therefore, outbreaks occurring in a single city could cause the state to display high activity levels.

*Data collected in ILINet may disproportionately represent certain populations within a state, and therefore may not accurately depict the full picture of influenza activity for the whole state.

*Data displayed in this map are based on data collected in ILINet, whereas the State and Territorial flu activity map are based on reports from state and territorial epidemiologists. The data presented in this map is preliminary and may change as more data is received.

*Differences in the data presented by CDC and state health departments likely represent differing levels of data completeness with data presented by the state likely being the more complete.

*For the data download you can use Activity Level for the number and Activity Level Label for the text description.

*This graphic notice means that you are leaving an HHS Web site.

For more information, please see CDC's Exit Notification and Disclaimer policy.

For more information on the methodology, please visit Outpatient Illness Surveillance methods section

Influenza

Week 11 (ending March 16)

- Seasonal influenza activity remains elevated nationally but is decreasing.
 Activity is decreasing or stable in nine HHS regions and increasing slightly in the Pacific Northwest.
- 12% positivity
- Most frequent virus: A(H1N1)pdm09, A(H3N2), B viruses
- Outpatient Respiratory Illness: 3.4%

Preliminary In-Season Estimates

• Illnesses: 30-56 M

Medical Visits: 14-26 M

Hospitalizations: 340,000-700,000

Deaths: 21,000-61,000

Delaware ILI Activity Level: MinimalHospitalizations, YTD: 72

Deaths, YTD: 6

Percentage Vaccinated: 32.1%

Location	Week 11	Year to Date
Delaware	468	7,8157,325

New Castle	259	3,961
Kent	117	1,904
Sussex	92	1,949

COVID-19

As of March 16, 2024

- Positive cases this week: 171
- Current daily hospital admissions: 7.7
- Current COVID-19 deaths this season: 144
- Total vaccinated with updated 2023-2024 dose: 14.8%
